31/ FINANCIAL RISK MANAGEMENT

In the normal course of business the Company may be exposed to various financial risks, the most important of which are market risk (including currency risk, changes in the fair value and price risk), credit risk, liquidity risk and risk of interest-bearing cash flows. The general risk management is focused on the difficulty of forecasting the financial markets and to achieve minimizing the potential negative effects that could affect the financial results and position of the Company. The financial risks are identified, measured and monitored through various control mechanisms in order to establish adequate prices for the products and services of the Company and attracted their loan capital, as well as to assess adequately the market circumstances of these investments and the forms for maintenance of free liquid funds through preventing undue concentration of a particular risk.

Risk management is carried out by the management of the Company under policies adopted by the Board of Directors of the Company. The Board of Directors has approved the basic principles of general financial risk management, based on which have developed specific procedures for the management of individual specific risks such as currency, interest rate, credit and liquidity risk and the use of non-derivative instruments.

Currency risk

Currency risk is linked to adverse movements in the exchange rate of the foreign currency against the Bulgarian lev in future business operations, recognized foreign currency assets and liabilities and the net investments in foreign companies.

Most of the company's operations are usually denominated in Bulgarian levs and / or in euro.

In order to control the foreign currency risk in the company, a system of planning of import deliveries, for foreign currency sales as well as procedures for daily monitoring of movements in the dollar exchange rate and control of forthcoming payments is introduced.

Price risk

The Company is exposed to price risk on three main factors:

- A) rising labor costs;
- B) competition from smaller companies - collectives;
- C) competition from the Asian segment;

To minimize this impact, the company applies a company strategy to optimize costs, validate alternative suppliers and subcontractors. Price policy is a function of three main factors - cost structure, competitor prices and purchasing power to customers.

Credit risk

Credit risk is the risk that the customers of The Company will not be able to pay in full and in time with the amounts due under trade receivables. The latter are presented in the consolidated statement of financial position at net value after deducting the impairment allowance for doubtful and bad debts.

Such impairment is made where and when events have existed identifying losses from uncollectible according to previous experience. Company deals with counterparties with a history of relationships of its main markets by partnering with a number of Bulgarian and foreign companies and institutions.

Credit risk is minimized by procedures in the selection and ongoing monitoring of liquidity and financial stability of trading partners. In default of receivables from these counterparties Company has set a deadline of 30 days after starting up collection of receivables. Deferred payments (credit sales) for contractors are available only to customers who have a long history and trade cooperation with The Company's sound financial position and lack of violations in compliance with the agreed credit terms.

The credit policy of The Company provides that each new customer is analyzed for creditworthiness before offering standard terms of delivery and payment. Analysis, performing by The Company includes but is not limited to visiting customers, gathering information on monthly turnovers.

Collection of receivables is controlled directly by the Executive Director of company and respectively by the management of the

subsidiaries. Their responsibility is operative to control and regulate receivables in conformity with the market and the needs of The Company.

The Company has developed policies and procedures to assess the creditworthiness of their counterparties and credit rating and credit limits by customer group.

The Company's management currently monitors and adjusts the forming concentration of receivables from customers and counterparties.

Cash in The Company and settlement operations are concentrated in different first-class banks. In the distribution of cash the management take into consideration a number of factors, including the size of the capital, security, liquidity, credit potential and rating of the bank and others.

Liquidity risk

Liquidity risk is the adverse situation, that the Company will not be able to meet unconditionally all its obligations within their maturity.

The Company generated and maintained a significant amount of cash. Internal source of liquidity is the Company's main business, generating sufficient operational flows. . External sources of funding are banks and other permanent partners. A significant impact on the company's liquidity may be the change in the dollar's exchange rate in relation to US dollar positions and the market dynamics if it deviates from projected expectations. In order to isolate potential liquidity risk, the company operates a system of alternative mechanisms of action and forecasts, the ultimate effect of which is the maintenance of good liquidity, respectively the ability to finance its business activity. This is complemented by ongoing monitoring of the maturity of assets and liabilities and control of outgoing cash.

Risk of interest-bearing cash flows

In the structure of the Company's assets, earning assets are represented by cash, bank deposits and loans that have a fixed interest rate. On the other hand, the Company's borrowings in the form of long-term and short-term loans are usually with variable rate. This fact partly puts cash flows of the Company depending on the interest rate risk. Covering this risk is achieved in two ways:

- a) optimize the sources and structure of credit resources for achieving relatively lower cost of borrowings; and
- b) combined structure of interest rates on loans comprising two components - a fixed and a variable ratio between them, as well as their absolute value can be achieved and maintained in a favorable rate for the Company. The fixed component is relatively low absolute value and a large enough share of the total rate. This fact eliminates the possibility of a significant change in interest rates at a possible update of the variable component. This minimizes the likelihood of an unfavorable change in cash flows.

The management of the company is currently monitoring and analyzing its exposure to changes in interest rates. Different scenarios of refinancing, renewal of existing positions and alternative financing are simulated. Based on these scenarios, the effect on financial result and equity is measured when changing with certain points or percentages. For each simulation, the same assumption of interest rate change applies to all major currencies. Calculations are made for significant interest-bearing items.

Capital risk management

With the management of the capital, the company aims to create and maintain opportunities to continue to operate as a going concern and to ensure the appropriate return of the invested funds to shareholders, the economic benefits of other stakeholders and participants in its business, and to maintain an optimal capital structure, to reduce the cost of capital.

The Company is currently monitoring the capital adequacy and structure on the basis of the debt ratio. This ratio is calculated between the net debt capital and the total amount of the committed capital. Net debt capital is defined as the difference between all borrowed funds as stated in the statement of financial position and cash and cash equivalents. The total amount of committed capital is equal to equity and net debt capital.

Fair Values

Fair value is generally the amount for which an asset may be exchanged or an obligation to be paid under normal terms of trade between independent, willing and informed counterparties. The policy of the company is to disclose in its financial statements the fair value of financial assets and liabilities.

The fair value of financial instruments that are not traded on active markets is determined using valuation techniques based on different valuation techniques and management assumptions made on the basis of market conditions at the date of the statement of financial position.

The concept of fair value implies the realization of financial instruments through sale. In most cases, however, especially with respect to trade receivables and payables, loans and deposits, the Company expects to realize these financial assets through their full back pay or, respectively, repayment over time. Therefore, they are presented at amortized cost.

Also, the bulk of financial assets and liabilities are either short-term in nature (trade receivables and payables, short-term loans) or are reflected in the statement of financial position at market value (bank deposits, securities investments) fair value is approximately equal to their carrying amount.

Investments in subsidiaries and, exceptionally, part of investments in other minority interests, which are stated at cost (cost).

As long as there is still insufficient market experience, stability and liquidity for purchases and sales of certain financial assets and liabilities, there is no sufficient and reliable quote at market prices, which is further complicated at the current stage of the ongoing financial crisis in the country.

The management of the Company considers that, under the circumstances, the estimates of financial assets and liabilities presented in the statement of financial position are as reliable, adequate and reliable as possible for the purposes of financial reporting.
