"Sirma Group Holding" JSC and the companies from the Group realize their production and services without geographical restrictions. However, traditionally the highest sales Group generates in Europe and North America. These, together with United Kingdom revenues, occupy traditionally 99,55% of the total amount of consolidated revenue. Nevertheless, due to the exceptional diversification of its products and services, which are applied in many different sectors and customers, we can not talk about any dependence of the Group on individual clients or on particular services.

In Q1 2019 the Group sold products and services in 44 countries. The largest share of the consolidated revenues were from Bulgaria and amounted to BGN 6 642 thousand or 40,25% of total sales revenue, followed by UK with BGN 4 051 thousand or 24,55% and USA with BGN 2 371 thousand or 14,37%.

7.1.2.1. GOODWILL

The management of the Group has made the necessary procedures to perform the statutory impairment test for goodwill recognized in the consolidated financial statements for the acquisition of subsidiaries. For this purpose, it is accepted that each individual company appears as a "cash-generating unit". The calculations were made by the management taking into account the estimates of independent licensed valuers as of December 31, 2015 and a detailed review was made as to whether events and facts appeared to indicate changes in the assumptions and judgments made by the end of 2015 at 31.03.2019. As a basis for cash flow projections (before tax), the financial budgets developed by the management of the respective companies and the Group as a whole, covering a three to five year period, as well as other medium- and long-term plans intentions for the development and restructuring of the activities within the Group. The recoverable amount of each cash-generating unit is determined on a "value in use" basis. The key assumptions used to calculate the recoverable value of each object are in the following ranges:

- Growth rate in the three (or five) year period - from minus 1% to 50%;
- EBITDA growth rate - basically in the range of 1% to 67%;
- post-forecast growth in terminal value calculation - 0%;
- Discount rate (based on WACC) - from 3% to 30%.

The key assumptions used in the calculations are specifically determined for each reputable company treated as a separate cash-generating unit and according to its specific business, business environment and risks. The tests and judgments of the Group's management for the impairment of recognized goodwill are made in the light of its projections and intentions regarding future economic benefits that the Group expects to obtain from its subsidiaries,

through the use of their internally-created trademarks, commercial experience and revenues generated and expected in future by them, securing positions on Bulgarian and foreign markets (development and preservation), expectations for future sales and restructuring of the activity, etc. For these reputations the analysis of reasonably possible changes in the key assumptions used to calculate the value in use shows that the carrying amount of the goodwill would be higher than the recoverable amount.

The balance of receivables is formed from receivables from companies not participating in the consolidation but related parties within the meaning of the law.

Sales receivables are interest-free and are in BGN, EUR or USD.

Typically, companies in the Group negotiate a payment term for sales receivables between 10 and 30 days, and for sales receivables of materials up to 90 days.

The Group has set a maximum credit period of up to 360 days for which it does not charge interest to the related party-related counterparties. The delay after this period was accepted by the Group as an indicator of impairment.

The management of the Group companies assesses the collection by analyzing the specific receivables and the condition of the debtor company as well as the circumstances of the delay and the repayment options and then decides whether to recognize and accrue impairment on an individual basis and to what extent.

Loans are provided for working capital to the respective counterparties. As of 31.12.2017 the loans are not further secured by a special pledge or guarantee.

The conditions under which loans to affiliated companies are granted are as follows:

Receivables from customers are interest-free and are mainly in: Bulgarian BGN, EUR, CAD and US \$.

Typically, the Group companies negotiate with customers the payment term for sales receivables of 30 to 180 days, unless there are certain specific maturity conditions for certain customers.

The group has defined a usual 360-day credit period for which it does not charge interest to customers. The delay after this period was accepted by the Group as an indicator of impairment. The management of the Group companies assesses the collection by analyzing the exposure of the particular client, the repayment options (to the client and through the collateral) and decides on the recognition and accrual of the respective impairment.

12/ CASH FLOW

The Group has no liquidity problems and operates with the available resources while maintaining a low level of indebtedness for the period under review. Traditionally, the largest pay-out in revenue streams is paid by customers, while the role of a negative item is paid by payments to suppliers and payments for staff and social security contributions.

13/ FINANCIAL RISK MANAGEMENT

13.1. Financial risk management

In the normal course of business the Group may be exposed to various financial risks, the most important of which are market risk (including currency risk, changes in the fair value and price risk), credit risk, liquidity risk and risk of interest-bearing cash flows. The general risk management is focused on the difficulty of forecasting the financial markets and to achieve minimizing the potential negative effects that could affect the financial results and position of the Group. The financial risks are identified, measured and monitored through various control mechanisms in order to establish adequate prices for the products and services of the Group and attracted their loan capital, as well as to assess adequately the market circumstances of these investments and the forms for maintenance of free liquid funds through preventing undue concentration of a particular risk.

Risk management is carried out by the management of the Group under policies adopted by the Board of Directors of the Group. The Board of Directors has approved the basic principles of general financial risk management, based on which have developed specific procedures for the management of individual specific risks such as currency, interest rate, credit and liquidity risk and the use of non-derivative instruments.

13.2. Foreign exchange rate risk

The companies of the Group carry out their activities in active exchange with foreign suppliers and customers and are therefore exposed to currency risk.

A significant amount of the Group's revenue is generated by exports of services contracted for payment in US dollars. The currency risk is related to the negative movement of the US dollar exchange rate against the Bulgarian lev in the future business operations, the recognized foreign currency assets and liabilities and the net investments in foreign companies.

Companies abroad sell their services and products mainly on local markets.

To control currency risk, there is a system in place throughout the Group for import supply planning, sales in foreign currency Sales, as well as procedures for day-to-day monitoring of movements in the US dollar exchange rate and control of forthcoming payments.

Borrowings, when denominated in foreign currency, are mainly denominated in euro.

13.3. Price risk

The companies of the Group are exposed to price risk by two main factors:

- (a) increasing competition from countries such as India and China with significantly lower labor costs;
- (b) increasing competition on the Bulgarian market for attracting skilled labor and rising labor costs;

To minimize this impact, the Group's management applies a company strategy to optimize costs.

Pricing policy is a function of three main factors - cost structure, competitor prices and consumer purchasing power.

13.4. Credit risk

Credit is the risk that the clients of the Group will not be able to repay fully and within the usual time limits the amounts due from them under the trade receivables. The latter are presented in the consolidated statement of financial position in net amount after deduction of accrued impairment on doubtful and bad debts.

Such impairments are made where and when there are events identifying loss of uncollectability under previous experience.

The Group works with contractors with a history of relationships in its core markets, partnering with a large number of Bulgarian and foreign companies and institutions.

Credit risk is minimized through established selection procedures and ongoing monitoring of liquidity and financial stability of trading partners. If the receivables of these counterparties are overdue, the Group has set a 30-day period after which the collection of receivables starts.

Deferred payments (sales on credit) to counterparties are only available to customers who have a long history and commercial cooperation with the Group, good financial standing and no breaches of compliance with the agreed credit terms.

The Group's credit policy provides for each new client to be considered for creditworthiness before offering standard delivery and payment terms. The analysis performed by the Group includes, but is not limited to, customer visits, collection of monthly turnover data.

The collection of receivables is controlled directly by the executive director of the parent company and respectively the subsidiaries' management. It is their responsibility to control and regulate receivables in accordance with the objective market circumstances and needs of the Group.

The Group has developed policies and procedures for assessing the creditworthiness of its counterparties and setting credit rating and credit limits by group of clients.

The management of the Group is currently monitoring and regulating the resulting concentration of receivables by customers and counterparties.

13.5. Liquidity risk

The liquidity risk is expressed in the negative situation that the Group will not be able to meet unconditionally all its obligations according to their maturity.

The Group generates and maintains a significant volume of liquidity. An internal source of liquidity for the Group is the main business of its companies generating sufficient operating flows. External sources of funding are banks and other permanent partners. Substantial effect on the Group's liquidity may be the change in the USD exchange rate in relation to dollar positions.

13.6. Risk of interest-bearing cash flows

In the structure of the Group's assets, interest-bearing assets are represented by cash, bank deposits and loans granted at a fixed interest rate. On the other hand, the borrowed funds of the Group in the form of long-term and short-term loans are usually with variable interest rates. This circumstance partially puts the cash flows of the Group in line with interest rate risk. The coverage of this risk is achieved in two ways:

- (a) optimizing sources and the structure of credit resources to achieve a relatively lower cost of borrowed funds; and
- (b) a combined structure of interest rates on loans, which contains two components - constant and variable, the ratio between which and their absolute value can be achieved and maintained at a favorable rate for the companies of the Group. The permanent component has a relatively low absolute value and a large enough relative share in the total interest rate. This circumstance eliminates the likelihood of a significant change in interest rates with a possible update of the variable component. This also minimizes the likelihood of a change in the unfavorable direction of cash flows.

The management of the Group's companies, together with that of the parent, are currently monitoring and analyzing the exposure of the respective company to changes in interest rates.

13.7. Capital management risk

With the management of the capital, the Group aims to create and maintain opportunities for it to continue to operate as a going concern and to ensure the appropriate return of the invested funds to the shareholders, the economic benefits of other stakeholders and participants in its business as well as to maintain an optimal capital structure, to reduce the cost of capital. An analogous approach is also applied at the individual company level of the Group in terms of its capital structure and financing.

The Group is currently monitoring the capital adequacy and structure on the basis of the debt ratio. This ratio is calculated between the net debt capital and the total amount of the committed capital. Net debt capital is defined as the difference between all borrowed funds (short and long term) as stated in the balance sheet and cash and cash equivalents.

13.8. Fair Values

Fair value is generally the amount for which an asset may be exchanged or an obligation to be paid under normal terms of trade between independent, willing and informed counterparties. The Group's policy is to disclose in its financial statements the fair value of financial assets and liabilities.

The concept of fair value implies the realization of financial instruments through sale. In most cases, however, especially with respect to trade receivables and payables, loans and bank deposits, the Group expects to realize these financial assets through their full repayment or repayment over time. Therefore, they are presented at amortized cost.

Also, the bulk of the financial assets and liabilities are either short-term in nature (trade receivables and payables, short-term loans) or are reflected in the statement of financial position at market value (bank deposits, investments in securities) fair value is approximately equal to their carrying amount. An exception to this rule is part of the investments in other companies as a non-controlling interest, for which there is no market and objective conditions for the estimation of their fair value in an honest manner, which is why they are presented at cost. As long as there is not yet a sufficiently developed market, with stability and liquidity for purchases and sales of some financial assets and liabilities, there are not enough and reliable quotes available at market prices.

The management of the parent company considers that, under the circumstances, the estimates of financial assets and liabilities presented in the statement of financial position are as reliable, adequate and reliable as possible for the purposes of financial reporting.
