"Sirma Group Holding JSC" is a public company under the Public Offering of Securities Act.

The number of employees as of 31.03.2025 was 438 people, including 429 employees under labour contracts and 9 under management contracts.

2. Basis for the preparation of the interim separate financial statements

2.1. Statement of compliance with IFRS adopted by the EU

These interim separate financial statements for the period of three months to 31 March 2025 have been prepared in accordance with IAS 34 "Interim Financial Reporting". It does not contain all the information required for the preparation of annual financial statements in accordance with IFRS and should be read in conjunction with the annual financial statements of the Company as of 31 December 2024, prepared in accordance with International Financial Reporting Standards (IFRS), developed and published by the International Accounting Standards Board (IASB) and adopted by the European Union (EU).

The interim financial statements are presented in Bulgarian leva (BGN), which is also the functional currency of the Company. All amounts are presented in thousand Bulgarian leva (BGN'000) (including comparative information) unless otherwise stated.

Management is responsible for the preparation and fair presentation of the information in these financial statements.

These interim financial statements are separate financial statements. The Company also prepares interim consolidated financial statements in accordance with International Financial Reporting Standards (IFRS) developed and published by the International Accounting Standards Board (IASB) and approved by EU. Investments in subsidiaries are accounted for and disclosed in accordance with IFRS 10 "Consolidated Financial Statements".

2.2. Application of the going concern principle

The interim financial statements have been prepared in accordance with the going concern principle and taking into account the possible effects of the military conflict between Russia and Ukraine, the unstable situation in the Middle East and others.

In these circumstances, the Company's management has analyzed and assessed the Company's ability to continue as a going concern based on available information about the foreseeable future and management expects that the Company has sufficient financial resources to continue its operations in the near future and continues to apply the going concern principle in preparing of the interim separate financial statements.

3. Changes in accounting policies

3.1. New Standards adopted as at 1 January 2025

The Company has applied the following new standards, amendments and interpretations to IFRS, developed and published by the International Accounting Standards Board, which are mandatory for application from the annual period beginning on 1 January 2025, but do not have a significant effect on their application on the financial result and the financial condition of the Company:

- Amendments to IAS 21 "The effects of changes in foreign exchange rates: Lack of exchangeability", effective from 1 January 2025, adopted by the EU.

3.2. Standards, amendments and interpretations to existing standards that are not yet effective and have not been adopted early by the Company

At the date of authorisation of these financial statements, certain new standards, amendments and interpretations to existing standards have been issued, but are not effective or adopted by the EU for the financial year beginning on 1 January 2025 and have not been applied early by the Company. They are not expected to have a material impact on the Company's financial statements. Management anticipates that all relevant pronouncements will be adopted in the Company's accounting policies for the first period beginning after the effective date of the pronouncement.

A list of the changes in the standards is provided below:

- Annual Improvements Volume 11, effective from 1 January 2026, not yet adopted by the EU;
- Amendments to the Classification and Measurement of Financial Instruments (Amendments to IFRS 9 and IFRS 7), effective from 1 January 2026, not yet adopted by the EU;
- IFRS 18 Presentation and Disclosure in Financial Statements effective from 1 January 2027, not yet adopted by the EU;
- IFRS 19 Subsidiaries without Public Accountability: Disclosures, effective from 1 January 2027, not yet adopted by the EU.

4. Significant accounting policies

4.1. Overall considerations

The significant accounting policies that have been used in the preparation of these separate financial statements are summarized below.

The financial statements have been prepared using the measurement bases specified by IFRS for each type of asset, liability, income and expense. The measurement bases are more fully described in the accounting policies below.

It should be noted that accounting estimates and assumptions are used for the preparation of the separate financial statements. Although these estimates are based on management's best knowledge of current events and actions, actual results may ultimately differ from those estimates.

4.2. Presentation of separate financial statements

The separate financial statements are presented in accordance with IAS 1 “Presentation of Financial Statements”.

The Company has elected to present the statement of profit or loss and other comprehensive income as a single statement.

Two comparative periods are presented for the statement of financial position when the Company applies an accounting policy retrospectively, makes a retrospective restatement of items in its financial statements, or reclassifies items in the financial statements and this has a material impact on the statement of financial position at the beginning of the preceding period.

4.3. Climate-related matters

Risks induced by climate changes may have future adverse effects on implications for certain economic sectors. These risks include physical risks (even if the risk of physical damage is low due to the company activities and geographical locations). As of the end of the previous period, as of 31 March 2025, the Company has not identified any significant risks caused by climate change that could have a negative and significant impact on the separate financial statements of the Company. Management continuously assesses the impact of climate-related issues and takes adequate measures to mitigate or neutralize the impact of identified risks.

The Company has successfully implemented and regulated a hybrid working environment (remote and in-person) for its offices. In addition to all the other benefits, telecommuting reduces the carbon footprint of transportation to/from each employee's workplace. The Company is committed to further reducing the carbon footprint of its employees' operations, by updating its business travel policies and minimizing the use of air travel. In addition, measures are taken to optimize fuel consumption for heating and transport, optimization of heating, ventilation, cooling, lighting systems, setting equipment (computers, air conditioners) to turn off automatically, stimulating the holding of meetings, discussions, and trainings remotely, providing teleconferencing equipment to avoid frequent business travel, and more. In relation with maintaining and improving the energy efficiency of the rented premises, the Company has taken measures to increase the awareness of employees regarding the use of energy, as well as the implementation of energy-saving technological solutions.

In the third quarter of 2023, Sirma Group Holding JSC successfully put into operation its own photovoltaic system without batteries, located in its central building. This measure aims to increase the share of renewable energy used. Sirma's photovoltaic system is planned to produce up to 30% of the building's consumption.

Some of the used computer equipment reaches the end of its productive capacity and is replaced accordingly. The hardware that is still possible to use is donated to one of the many charity campaigns organized by the Group. Equipment that can no longer be used is provided to specialized partner companies that recycle computer equipment.

4.4. Foreign currency translation

Foreign currency transactions are translated into the functional currency, using the exchange rates prevailing at the dates of the transactions (spot exchange rate as published by the Bulgarian National Bank). Foreign exchange gains and losses resulting from the settlement of such transactions and from the re-measurement of monetary items at year-end exchange rates are recognised in profit or loss.

Non-monetary items measured at historical cost are translated using the exchange rates at the date of the transaction (not retranslated). Non-monetary items measured at fair value are translated using the exchange rates at the date when fair value was determined.

Bulgarian leva is pegged to the euro at an exchange rate of EUR 1 = BGN 1,95583.

4.5. Segment reporting

Management determines the operating segments based on the main products and services provided by “Sirma Group Holding” JSC.

The operating segments in the company are the following: System Integration, Hospitality, IT services, Financial industry and Others.

Segment “System Integration” offers its clients system integration, cloud services and cybersecurity services. The target market is mainly Bulgarian financial institutions, insurance companies, healthcare organizations, multinational companies with operations in Bulgaria and state and municipal administrations.

Segment “Hospitality” segment offers IT solutions, consulting, system integration and data analysis to its clients from the hospitality industry. The target customers of the segment are hotel groups, tour operators, travel agencies and technology providers for the hospitality industry.

Segment “IT Services” is focused on cross-industry services, cross-selling and services for the public sector.

Segment “Financial Industry” offers support to financial institutions on their path to digitalization and implementation of artificial intelligence in their operations. The target customers of the segment are small and medium-sized banks and fintech companies. The activity of the Financial Industry segment is divided into 5 sub-segments – Financial Services, Financial Consulting, Oracle, Temenos and IT Solutions.

Segment “Others” offers IT solutions, consulting and IT services to its clients in the fields of transport and logistics, insurance and healthcare.

Each of these operating segments is managed separately, as different technologies, resources and marketing approaches are used for each product line. All transactions between the segments are carried out at the prices of corresponding transactions between independent parties.

The measurement policies the company uses for segment reporting under IFRS 8 “Operating Segments” are the same as those used in its consolidated financial statements, except that:

- post-employment benefit expenses;
 - R&D costs relating to new business activities; and
- which are not included in arriving at the operating profit of the operating segments.

In addition, “Sirma Group Holding” JSC assets which are not directly attributable to the business activities of any operating segment are not allocated to a segment.

Information about the results of the separate segments that is regularly reviewed by the chief operating decision maker does not include isolated unrepeatable events. Financial income and costs are also not included in the results of operating segments which are regularly reviewed by persons, which are responsible for operating decision making.

There have been no changes from prior periods in the measurement methods used to determine reported segment profit or loss. No asymmetrical allocations have been applied between segments.

4.6. Revenue

The basic revenue generated by the Company is related revenue from sales of services, interest income, revenue from participations, revenue from financing and other revenue.

To determine whether to recognise revenue, the Company follows a 5-step process:

- 1) Identifying the contract with a customer
- 2) Identifying the performance obligations
- 3) Determining the transaction price
- 4) Allocating the transaction price to the performance obligations
- 5) Recognising revenue when/as performance obligation(s) are satisfied.

Revenue is recognised either at a point in time or over time, when (or as) the Company satisfies performance obligations by transferring the promised goods or services to its customers.

Evaluation

Revenue is measured based on the transaction price determined for each contract.

When determining the price of the transaction, the Company takes into account the terms of the contract and its usual commercial practices.

The transaction price is the amount of consideration to which the Company expects to be entitled in exchange for the customer's transfer of the promised goods or services, excluding amounts collected on behalf of third parties (e.g. value added tax). The remuneration promised in the contract with the client may include fixed amounts. When (or as) a performance obligation is satisfied, the Company recognizes as revenue the value of the transaction price that is attributed to this performance obligation.

The company examines whether there are other promises in the contract that are separate performance obligations for which a part of the transaction price should be allocated.

The Company recognises contract liabilities for consideration received in respect of unsatisfied performance obligations and reports these amounts as other liabilities in the statement of financial position. Similarly, if the Company satisfies a performance obligation before it receives the consideration, the Company recognises either a contract asset or a receivable in its statement of financial position, depending on whether something other than the passage of time is required before the consideration is due.

4.6.1. Revenue recognised over time

- **Rendering of services**

The services provided by the Company include the following services: software services, support and subscription for software applications and licensing services.

Revenue from software services is recognized when control over the benefits of the services has been transferred to the user of the services. Revenue is recognized over time based on the fulfilment of the individual performance obligations.

In recognizing revenue from the service provided, the Company applies a method that takes into account the resources invested.

For stand-alone sales of hardware and/or software that are neither customized by the Company nor subject to significant integration services, control is transferred at the time the customer accepts delivery of the goods. When such products are customized or sold together with significant integration services, the goods and services constitute a single combined performance obligation for which control is considered to be transferred over time. This is because the combined product is unique to each customer (there is no alternative use) and the Company has an enforceable right to payment for work performed to date. Revenue from these performance obligations is recognized over time as the customization or integration is performed, using the percentage of completion method to measure progress. Because costs are generally incurred evenly over time and are considered to be

proportional to the Company's results, the percentage of completion method most accurately reflects the transfer of goods and services to the customer.

For sales of software that is neither customized by the Company nor subject to significant integration services, the license term begins at the time of delivery. For sales of software that is associated with significant customization or integration services, the license term begins at the start of the related services.

Support Services (After-Sales Services)

The Company enters into fixed-price support contracts with its customers for a period of one to three years. Customers pay for the service in monthly instalments according to the relevant terms specified in each contract.

Consulting and IT Services

The Company provides consulting services related to the design of IT software applications. Revenue from these services is recognized on a time and materials basis when the services are rendered. Invoices are made to customers monthly based on the progress of the work. Any amounts that remain unadjusted at the end of the reporting period are presented in the statement of financial position as receivables, as only the passage of time is required before payment of these amounts is due.

Software application development

The Company enters into contracts for the design, development and installation of software applications for a fixed fee and recognizes the related revenue over time. Due to the high degree of interdependence between the various elements of these projects, they are reported as a single performance obligation. When a contract also includes promises to perform post-sale services, the total transaction price is allocated to each of the separate performance obligations that can be identified under the contract based on their relative stand-alone selling price.

To represent the Company's progress in transferring control of the systems to the customer and to determine when and to what extent revenue can be recognized, the Company measures its progress toward complete satisfaction of the performance obligation by comparing the actual hours spent to date with the total expected/planned hours required to design, develop and install each system. The labor-hours method most faithfully represents the transfer of goods and services to each customer due to the Company's ability/available resources to make reliable estimates of the total number of hours required for performance, based on its significant historical experience in building similar systems.

Measurement

Revenue is measured based on the transaction price determined for each contract. In determining the transaction price, the Company considers the terms of the contract and its usual business practices. The transaction price is the amount of consideration to which the Company expects to be entitled in exchange for transferring the promised goods or services to the customer, excluding amounts collected on behalf of third parties (for example, value added tax). The consideration promised in the contract with the customer may include fixed amounts, variable amounts, or both.

When (or as) a performance obligation is satisfied, the Company recognizes as revenue the amount of the transaction price (which excludes estimates of variable consideration containing restrictions) that is attributable to that performance obligation.

The Company considers whether there are other promises in the contract that are separate performance obligations to which a portion of the transaction price should be allocated.

When determining the transaction price, the impact of variable remuneration, the presence of significant financing components, non-monetary remuneration and remuneration due to the client (if any) is taken into account.

4.6.2. Revenue recognised at a point of time

- **Sale of goods**

Sales of goods include sales of goods in the field of computer equipment, office equipment and software. Revenue is recognized when the Company has transferred control of the delivered goods to the buyer. Control is considered to be transferred to the buyer when the customer has accepted the goods without objection.

Revenue from the sale of goods in the field of computer equipment, office equipment and software, which are not subject to a contract for future service support, is recognized at the time of delivery. When the goods require customization, modification or implementation, the Company applies a method for measuring the resources used.

4.6.3. Revenue from investment property rental

Rental revenue from operating leases is recognized as revenue on a straight-line basis over the term of the lease, except where the management of the company determines that another systematic basis more accurately reflects the time model, which utilizes the reaped benefit of the leased asset.

4.6.4. Interest and dividend income

Interest income is related to loan agreements and deposits granted under the business activity of the holding company. It is reported on an accrual basis using the effective interest method. Dividend income is recognised at the time the right to receive payment is established.

4.6.5. Revenue from financing

Initially financing is recognised as deferred income when there is significant certainty as to whether the Company will receive financing and will fulfil any associated requirements. Financing received to cover current expenditure is recognised in the period when the respective expenses were incurred. Financing received to cover capital expenditure for non-current assets is recognised in line with the depreciation charges accrued for the period.

4.7. Contract liabilities

The Company recognises contract assets and/ or liabilities when one of the parties in the contract has fulfilled its obligations depending on the relationship between the business of the company and the payment by the client. The Company presents separately any unconditional right to remuneration as a receivable. The receivable is the unconditional right of the company to receive remuneration.

A contract liability is presented in the statement of financial position where a customer has paid an amount of consideration prior to the entity performing by transferring the related good or service to the customer.

The Company recognises contract assets when performance obligations are satisfied, and payment is not due on behalf of the client. A contract asset is the right of a company to receive remuneration in exchange for the goods or services that the company has transferred to a customer.

Subsequent the Company measures a contract asset in accordance with IFRS 9 Financial Instruments.

4.8. Operating expenses

Operating expenses are recognised in profit or loss upon utilization of the service or as incurred. The Company recognises two types of contract costs related to the execution of contracts for the supply of services/ goods/ with customer: incremental costs of obtaining a contract and costs to fulfil a contract. Where costs are not eligible for deferral under IFRS 15, they are recognised as current

expenses at the time they arise, such as they are not expected to be recovered, or the deferral period is up to one year.

The following operating expenses are always recognised as current expenses at the time of their occurrence:

- General and administrative costs (unless those costs that are chargeable to the customer);
- Costs of wasted materials;
- Costs that relate to satisfied performance obligation;
- Costs for which the company cannot distinguish whether the costs relate to unsatisfied performance obligation or to satisfied performance obligation.

Expenditure for warranties is recognised and charged against the associated provision when the related revenue is recognised.

4.9. Interest expenses and borrowing costs

Interest expenses are reported on an accrual basis using the effective interest method.

Borrowing costs primarily comprise interest on the Company's borrowings. Borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset are capitalized during the period of time that is necessary to complete and prepare the asset for its intended use or sale. Other borrowing costs are expensed in the period in which they are incurred and reported in 'Finance costs'.

To the extent that the Company borrows funds generally and uses them for the purpose of obtaining a qualifying asset, the Company shall determine the amount of borrowing costs eligible for capitalization by applying a capitalization rate to the expenditures on that asset. The capitalization rate shall be the weighted average of the borrowing costs applicable to the borrowings of the Company that are outstanding during the period, other than borrowings made specifically for the purpose of obtaining a qualifying asset.

4.10. Goodwill

Business combinations that occur between entities under common control are outside the scope of IFRS 3 Business Combinations. However, in the absence of other explicit requirements, the Company has elected to apply the purchase method of accounting in accordance with IFRS 3 to all of its business combinations. All identifiable assets acquired and liabilities acquired are recognized at fair value. The consideration transferred (if any in a business combination under common control) is measured at fair value. The consideration transferred includes the fair value of assets or liabilities arising from contingent consideration. Acquisition costs are recognized in profit or loss in the period in which they are incurred.

Goodwill is stated after separate recognition of identifiable intangible assets. It is calculated as the excess of the sum of a) fair value of consideration transferred, b) the recognised amount of any non-controlling interest in the acquiree and c) acquisition-date fair value of any existing equity interest in the acquiree, over the acquisition-date fair values of identifiable net assets. If the fair value of any identifiable net assets exceed the sum calculated above, the excess amount (i.e. gain on a bargain purchase) is recognised in profit or loss immediately.

Goodwill represents the future economic benefits arising from a business combination that are not individually identified and separately recognized.

See note 6 for information on how goodwill is initially determined. Goodwill is carried at cost less accumulated impairment losses. For the purposes of impairment testing, goodwill is allocated to each of the Group's cash-generating units (or groups of cash-generating units) that is expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the acquiree are assigned to those units. Refer to note 4.16 for a description of impairment testing procedures.

On disposal of the relevant cash-generating unit, the attributable amount of goodwill is included in the determination of the profit or loss on disposal.

4.11. Intangible assets

Intangible assets include software products and software module rights. They are accounted for using the cost model. The cost comprises its purchase price, including any import duties and non-refundable purchase taxes, and any directly attributable expenditure on preparing the asset for its intended use, whereby capitalized costs are amortized on a straight-line basis over their estimated useful lives, as these assets are considered finite.

After initial recognition, an intangible asset is carried at its cost less any accumulated amortization and any accumulated impairment losses. Impairment losses are recognised in the statement of profit or loss/ statement of profit or loss and other comprehensive income for the respective period.

Subsequent expenditure on an intangible asset after initial are recognized in the separate statement of profit or loss and other comprehensive income for the period of their occurrence, unless due to them the asset can generate more than the originally projected future economic benefits and when these costs can be reliably estimated and attributed to the asset. If these conditions are met, the subsequent expenditure is added to the carrying amount of the intangible asset.

Residual values and useful lives are reviewed by the management at each reporting date.

Amortization is calculated using the straight-line method over the estimated useful life of individual assets as follows:

- Software 5-20 years
- Others 2-20 years

Amortization has been included within “Depreciation, amortization of non-financial assets”.

Expenditure on research (or the research phase of an internal project) is recognised as an expense in the period in which it is incurred.

Costs that are directly attributable to the development phase of an intangible asset are capitalized provided they meet the following recognition requirements:

- completion of the intangible asset is technically feasible so that it will be available for use or sale;
- the Company intends to complete the intangible asset and use or sell it;
- the Company has the ability to use or sell the intangible asset;
- the intangible asset will generate probable future economic benefits. Among other things, this requires that there is a market for the output from the intangible asset or for the intangible asset itself, or, if it is to be used internally, the asset will be used in generating such benefits;
- there are adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and
- the expenditure attributable to the intangible asset during its development can be measured reliably.

Development costs not meeting these criteria for capitalization are expensed as incurred.

Directly attributable costs to the development phase include employee remuneration and social security expense as well as hired services expenses. Internally generated intangible assets are subject to the same subsequent measurement method as externally acquired intangible assets. However, until completion of the development project, the assets are subject to impairment testing only as described below in note 4.16.

The gain or loss arising on the disposal of an intangible asset is determined as the difference between the proceeds and the carrying amount of the asset and is recognised in profit or loss within “Gain/ (Loss) on sale of non-current assets”.

The recognition threshold adopted by the Company for the intangible assets amounts to BGN 700.

4.12. Property, plant and equipment

Property, plant and equipment are initially measured at cost, which comprises its purchase price and any directly attributable costs of bringing the asset to working condition for its intended use.

After initial recognition, the property, plant and equipment is carried at its cost less any subsequent accumulated depreciation and any subsequent accumulated impairment losses. Impairment losses are recognised in the separate statement of profit or loss and other comprehensive income for the respective period.

Subsequent expenditure relating to an item of property, plant and equipment is added to the carrying amount of the asset when it is probable that this expenditure will enable the asset to generate future economic benefits in excess of the its originally assessed standard of performance. All other subsequent expenditure is recognised as incurred.

Material residual value estimates and estimates of useful life are updated from the management at each reporting date.

Property, plant and equipment acquired under finance lease agreement, are depreciated based on their expected useful life, determined by reference to comparable assets or based on the period of the lease contract, if shorter.

Depreciation is calculated using the straight-line method over the estimated useful life of individual assets as follows:

- Buildings 50 years
- Machines 3-8 years
- Vehicles 4 years
- Business inventory 7,5 years
- IT equipment 2-5 years
- Others 7,5 years

Depreciation expense is included in the separate statement of profit or loss and other comprehensive income on the line "Depreciation expense for non-financial assets".

Gains or losses arising on the disposal of property, plant and equipment are determined as the difference between the disposal proceeds and the carrying amount of the assets and are recognised in profit or loss within "Gain/(Loss) on sale of non-current assets".

The recognition threshold adopted by the Company for property, plant and equipment amounts to BGN 700.

4.13. Investments in subsidiaries

Subsidiaries are firms under the control of the Company. The Company controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. In the financial statements of the Company investment in subsidiaries is accounted at cost of the investment.

The Company recognises a dividend from a subsidiary in profit or loss in its separate financial statements when its right to receive the dividend is established.

4.14. Investments in associates and joint ventures

A joint venture is a contractual arrangement under which the Company and other independent parties engage in a business that is subject to joint control and the parties having joint control over the entity have rights to the entity's net assets. Investments in joint ventures are reported at cost.

Associates are those entities over which the Company is able to exert significant influence, but which are neither subsidiaries nor interests in a joint venture. Investments in associates are recognised at acquisition cost.

The Company recognizes a dividend from a joint venture or associate in profit or loss in its financial statements when its right to receive the dividend is established.

Upon loss of significant influence over the associate, the Company measures and recognizes any retaining investment at its fair value. Any difference between the carrying amount of the associate upon loss of significant influence and the sum of the fair value of the retaining investment and proceeds from disposal is recognized in profit or loss.

If the ownership interest in an associate is reduced but significant influence is retained, only a proportionate share of the amounts previously recognized in other comprehensive income are reclassified to profit or loss.

As of 31 March 2025, the Company has a 40% interest in Consortium Smart Systems. Management has analyzed its participation and classified it as a “joint venture” in accordance with IFRS 11 “Joint Arrangements”.

4.15. Leases

The Company as a lessor

As a lessor the Company classifies its leases as either operating or finance leases.

A lease is classified as a finance lease if it transfers substantially all the risks and rewards of ownership of the underlying asset, and as an operating lease if it does not substantially transfer all the risks and rewards of ownership of the underlying asset.

Assets subject to operating lease agreements are presented in the statement of financial position and are depreciated and amortized in accordance with the depreciation and amortization policy of the Company for similar assets and with the requirements of IAS 16 “Property, Plant and Equipment” and IAS 38 “Intangible Assets”. The Company earns rental income from operating leases of its investment properties (see note 10). Rental income is recognised on a straight-line basis over the term of the lease.

The Company as a lessee

For any new contracts the Company considers whether a contract is, or contains a lease. A lease is defined as ‘a contract, or part of a contract, that conveys the right to use an asset (the underlying asset) for a period of time in exchange for consideration’. To apply this definition the Company assesses whether the contract meets three key evaluations which are whether:

- the contract contains an identified asset, which is either explicitly identified in the contract or implicitly specified by being identified at the time the asset is made available to the Company
- the Company has the right to obtain substantially all of the economic benefits from use of the identified asset throughout the period of use, considering its rights within the defined scope of the contract
- the Company has the right to direct the use of the identified asset throughout the period of use

The Company assesses whether it has the right to direct ‘how and for what purpose’ the asset is used throughout the period of use.

Measurement and recognition of leases as a lessee

At lease commencement date, the Company recognises a right-of-use asset and a lease liability on the statement of financial position. The right-of-use asset is measured at cost, which is made up of the initial measurement of the lease liability, any initial direct costs incurred by the Company, an estimate of any costs to dismantle and remove the asset at the end of the lease, and any lease payments made in advance of the lease commencement date (net of any incentives received).

The Company depreciates the right-of-use assets on a straight-line basis from the lease commencement date to the earlier of the end of the useful life of the right-of-use asset or the end of the lease term. The Company also assesses the right-of-use asset for impairment when such indicators exist.

At the commencement date, the Company measures the lease liability at the present value of the lease payments unpaid at that date, discounted using the interest rate implicit in the lease if that rate is readily available or the Company's incremental borrowing rate.

Lease payments included in the measurement of the lease liability are made up of fixed payments (including in substance fixed), variable payments based on an index or rate, amounts expected to be payable under a residual value guarantee and payments arising from options reasonably certain to be exercised.

After initial measurement, the liability is reduced for payments made and increased for interest. It is remeasured to reflect any reassessment or modification, or if there are changes in in-substance fixed payments.

When a lease liability is revalued, the corresponding adjustment is recognized in the asset with the right of use or recognized in profit or loss if the carrying amount of the asset with the right of use has already been reduced to zero.

4.16. Impairment testing of intangible assets and property, plant and equipment

For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are largely independent cash inflows (cash-generating units). As a result, some assets are tested individually for impairment and some are tested at cash-generating unit level.

All assets and cash-generating units are tested for impairment at least annually. All other individual assets or cash-generating units are tested for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

An impairment loss is recognised for the amount by which the asset's or cash-generating unit's carrying amount exceeds its recoverable amount, which is the higher of fair value less costs to sell and value-in-use. To determine the value-in-use, management estimates expected future cash flows from each cash-generating unit and determines a suitable interest rate in order to calculate the present value of those cash flows. The data used for impairment testing procedures are directly linked to the Company's latest approved budget, adjusted as necessary to exclude the effects of future reorganisations and asset enhancements. Discount factors are determined individually for each cash-generating unit and reflect their respective risk profiles as assessed by management.

Impairment losses for cash-generating units reduce the carrying amount of the assets allocated to that cash-generating unit. All assets are subsequently reassessed for indications that an impairment loss previously recognised may no longer exist. An impairment charge is reversed if the cash-generating unit's recoverable amount exceeds its carrying amount.

4.17. Investment property

The investment property is initially measured at cost, which comprises the purchase price and any directly attributable expenses, e. g. legal fees, property transfer taxes and other transaction costs.

The Company accounts for investment property as buildings that are held for rental income and / or for capital appreciation, using the acquisition cost model.

The investment property of the Company includes buildings held to earn rentals and/or for capital appreciation and are accounted for using the cost model.

The investment property is initially measured at cost, which comprises the purchase price and any directly attributable expenses, e. g. legal fees, property transfer taxes and other transaction costs.

Following the initial recognition, the investment property is measured at cost less any subsequent accumulated depreciation and any subsequent impairment losses.

Subsequent expenditure relating to investment property, which is already recognised in the Company's financial statements, is added to the carrying amount of the investment property when it is

probable that this expenditure will enable the existing investment property to generate future economic benefits in excess of its originally assessed value. All other subsequent expenditure is recognised as incurred.

The investment property is derecognised upon its sale or permanent withdrawal from use in case that no future economic benefits are expected from its disposal. Gains or losses arising from the disposal of investment properties are determined as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in profit or loss.

Depreciation is calculated using the straight-line method over the estimated useful life of the buildings, which is 50 years.

Rental income and operating expenses from investment property are reported in the separate statement of profit or loss and other comprehensive income, respectively in the line "Revenue from sales", "Other expenses" and "Employee benefits expense" respectively and are recognised as described in note 24, note 28 and note 19.1.

4.18. Financial instruments

4.18.1. Recognition and derecognition

Financial assets and financial liabilities are recognised when the Company becomes a party to the contractual provisions of the financial instrument.

Financial assets are derecognised when the contractual rights to the cash flows from the financial asset expire, or when the financial asset and substantially all the risks and rewards are transferred.

A financial liability is derecognised when it is extinguished, discharged, cancelled or expires.

4.18.2. Classification and initial measurement of financial assets

Financial assets are initially measured at fair value, adjusted for transaction costs, except for financial assets at fair value through profit or loss and trade receivables that do not contain a significant financial component. The initial measurement of financial assets at fair value through profit or loss is not adjusted with transaction costs that are reported as current expenses. The initial measurement of trade receivables that do not contain a significant financial component represents the transaction price in accordance with IFRS 15.

Depending on the method of subsequent measurement, financial assets are classified into the following categories:

- Debt instruments at amortised cost;
- Financial assets at fair value through profit or loss (FVTPL);
- Financial assets at fair value through other comprehensive income (FVOCI) with or without reclassification in profit or loss, depending on whether they are debt or equity instruments.

The classification is determined by both:

- the entity's business model for managing the financial asset;
- the contractual cash flow characteristics of the financial asset.

All income and expenses relating to financial assets that are recognised in profit or loss are presented within finance costs, finance income or other financial items, except for impairment of trade receivables which is presented within other expenses in the separate statement of profit or loss and other comprehensive income.

4.18.3. Subsequent measurement of financial assets

The percentages of expected losses are based on the sales payment profiles and the corresponding historical credit losses that occurred during that period. Historical loss values are adjusted to reflect

current and forecast information about the macroeconomic factors that affect customers' ability to settle claims. The company has determined the GDP and unemployment rate of the countries in which it sells its goods and services, as the most important factors and accordingly adjusts historical losses based on the expected changes in these factors.

Financial assets at amortised cost

Financial assets are measured at amortised cost if the assets meet the following conditions and are not designated as FVTPL:

- they are held within a business model whose objective is to hold the financial assets and collect its contractual cash flows;
- the contractual terms of the financial assets give rise to cash flows that are solely payments of principal and interest on the principal amount outstanding.

This category includes non-derivative financial assets like loans and receivables with fixed or determinable payments that are not quoted in an active market. After initial recognition, these are measured at amortised cost using the effective interest method. Discounting is omitted where the effect of discounting is immaterial. The Company's cash and cash equivalents, trade and most other receivables fall into this category of financial instruments.

Trade receivables

Trade receivables are amounts due from customers for goods or services sold in the ordinary course of business. Typically, they are due to be settled within a short timeframe and are therefore classified as current. Trade receivables are initially recognised at amortized cost unless they contain significant financial components. The Company holds trade receivables for the purpose of collecting the contractual cash flows and therefore measures them at amortized cost using the effective interest method. Discounting is omitted where the effect of discounting is immaterial.

Financial assets at fair value through profit or loss (FVTPL)

Financial assets that are held within a different business model than “hold to collect” or “hold to collect and sell”, and financial assets whose contractual cash flows are not solely payments of principal and interest are accounted for at FVTPL. All derivative financial instruments fall into this category, except for those designated and effective as hedging instruments, for which the hedge accounting requirements apply (see below).

This category also contains an equity investment. The Company accounts for the investment at FVTPL and did not make the irrevocable election to account for the investment in subsidiaries at FVOCI.

Assets in this category are measured at fair value with gains or losses recognised in profit or loss. The fair values of financial assets in this category are determined by reference to active market transactions or using a valuation technique where no active market exists.

4.18.4. Impairment of financial assets

IFRS 9's new impairment requirements use forward-looking information to recognise expected credit losses – the “expected credit loss” (ECL) model.

Instruments within the scope of the new requirements included loans and other debt-type financial assets measured at amortised cost, trade receivables, contract assets recognised and measured under IFRS 15 and loan commitments and some financial guarantee contracts (for the issuer) that are not measured at fair value through profit or loss.

Recognition of credit losses is no longer dependent on the Company first identifying a credit loss event. Instead the Company considers a broader range of information when assessing credit risk and measuring expected credit losses, including past events, current conditions, reasonable and supportable forecasts that affect the expected collectability of the future cash flows of the instrument.

In applying this forward-looking approach, a distinction is made between:

- financial instruments that have not deteriorated significantly in credit quality since initial recognition or that have low credit risk (Stage 1) and
- financial instruments that have deteriorated significantly in credit quality since initial recognition and whose credit risk is not low (Stage 2)
- Stage 3 would cover financial assets that have objective evidence of impairment at the reporting date.

“12-month expected credit losses” are recognised for the first category while “lifetime expected credit losses” are recognised for the second category. Expected credit losses are determined as the difference between all contractual cash flows attributable to the Company and the cash flows it is actually expected to receive (“cash shortfall”). This difference is discounted at the original effective interest rate (or credit adjusted effective interest rate).

Measurement of the expected credit losses is determined by a probability-weighted estimate of credit losses over the expected life of the financial instrument.

Trade and other receivables, contract assets and finance lease receivables

The Company makes use of a simplified approach in accounting for trade and other receivables as well as contract assets and records the loss allowance as lifetime expected credit losses. These are the expected shortfalls in contractual cash flows, considering the potential for default at any point during the life of the financial instrument. In calculating, the Company uses its historical experience, external indicators and forward-looking information to calculate the expected credit losses.

The Company allows 50% for amounts that are 180 to 365 days past due and writes off fully any amounts that are more than 365 days past due.

4.18.5. Classification and measurement of financial liabilities

The Company's financial liabilities include borrowings, finance lease payments, trade and other payables and derivative financial instruments.

Financial liabilities are initially measured at fair value, and, where applicable, adjusted for transaction costs unless the Company designated a financial liability at fair value through profit or loss.

Subsequently, financial liabilities are measured at amortised cost using the effective interest method except for derivatives and financial liabilities designated at FVTPL, which are carried subsequently at fair value with gains or losses recognised in profit or loss (other than derivative financial instruments that are designated and effective as hedging instruments).

The Company has designated some financial liabilities at FVTPL to reduce significant measurement inconsistencies between investment properties in the United States and related US-dollar bank loans with fixed interest rates. These investment properties are measured using the fair value model, with changes in the fair value recognised in profit or loss. The fair value of loans used to finance these assets correlates significantly with the valuation of the investment properties held by the Company, because both measures are highly reactive to the market interest rate for 30-year government bonds. The loans are managed and evaluated on a fair value basis through a quarterly management review in comparison with the investment property valuations. Therefore, the Company designates such fixed interest rate loans as at FVTPL if they are secured by specific investment property assets that are held by the Company. This accounting policy reduces significantly what would otherwise be an accounting mismatch.

All interest-related charges and, if applicable, changes in an instrument's fair value that are reported in profit or loss are included within finance costs or finance income.

4.19. Inventory

Inventory includes raw materials, work in progress and goods. Cost of inventories includes all expenses directly attributable to the purchase or manufacturing process, recycling and other direct expenses connected to their delivery as well as suitable portions of related production overheads, based on normal operating capacity. Financing costs are not included in the cost of the inventories. At the end of every accounting period, inventories are carried at the lower of cost and net realizable

value. The amount of impairment of inventories to their net realizable value is recognized as an expense for the period of impairment.

Net realizable value is the estimated selling price of the inventories less any applicable selling expenses. In case inventories have already been impaired to their net realizable value and in the following period the impairment conditions are no longer present, than the new net realizable value is adopted. The reversal amount can only be up to the carrying amount of the inventories prior to their impairment. The reversal of the impairment is accounted for as decrease in inventory expenses for the period in which the reversal takes place.

The Company determines the cost of inventories by using the weighted average cost.

When inventories are sold, the carrying amount of those inventories is expensed in the period in which the related revenue is recognized.

4.20. Income taxes

Tax expense recognised in profit or loss comprises the sum of deferred tax and current tax not recognised in other comprehensive income or directly in equity.

Current income tax assets and/or liabilities comprise those obligations to, or claims from, fiscal authorities relating to the current or prior reporting periods, that are unpaid at the reporting date. Current tax is payable on taxable profit, which differs from profit or loss in the financial statements. Calculation of current tax is based on tax rates and tax laws that have been enacted or substantively enacted by the end of the reporting period.

Deferred income taxes are calculated using the liability method on temporary differences between the carrying amounts of assets and liabilities and their tax bases. However, deferred tax is not provided on the initial recognition of an asset or liability unless the related transaction affects tax or accounting profit.

Deferred tax assets and liabilities are calculated, without discounting, at tax rates that are expected to apply to their respective period of realization, provided they are enacted or substantively enacted by the end of the reporting period.

Deferred tax liabilities are always provided for in full.

Deferred tax assets are recognised to the extent that it is probable that they will be able to be utilized against future taxable income. For management's assessment of the probability of future taxable income to utilize against deferred tax assets, see note 4.25.2.

Deferred tax assets and liabilities are offset only when the Company has a right and intention to set off current tax assets and liabilities from the same taxation authority.

Changes in deferred tax assets or liabilities are recognised as a component of tax income or expense in profit or loss, except where they relate to items that are recognised in other comprehensive income or directly in equity, in which case the related deferred tax is also recognised in other comprehensive income or equity, respectively.

4.21. Cash

Cash and cash equivalents comprise cash on hand, current bank accounts, demand deposits and deposits up to 3 months, that are readily convertible into known amounts of cash and which are subject to an insignificant risk of changes in value.

4.22. Equity, reserves and dividend payments

Share capital represents the nominal value of shares that have been issued.

The repurchased own shares of the Company represent the value of the repurchased shares of Sirma Group Holding JSC from the company itself. The company has adopted the value of the repurchased shares to be presented on a separate line in the separate statement of financial position.

Share premium includes any premiums received on issue of share capital. In repurchase transactions, amounts are deducted from equity and no gain and/or loss is recognized. The consideration paid or received is recognized directly in equity. Any transaction costs associated with the issuing of shares are deducted from share premium, net of any related income tax benefits.

Other reserves include the following:

- legal reserves, common reserves;
- revaluation reserve – comprises gains and losses from the revaluation of non-financial assets;

Retained earnings include all current and prior period retained profits and uncovered losses.

Dividend payables to shareholders are included in ‘Related party payables’ when the dividends have been approved at the general meeting of shareholders prior to the reporting date.

All transactions with owners of the Company are recorded separately within equity.

4.23. Post-employment benefits and short-term employee benefits

The Company reports short-term payables relating to unutilized paid leaves, which shall be compensated in case it is expected the leaves to occur within 12 months after the end of the accounting period during which the employees have performed the work related to those leaves. The short-term payables to personnel include wages, salaries and related social security payments.

In accordance with Labour Code requirements, in case of retirement, after the employee has gained the legal right of pension due to years of services and age, the Company is obliged to pay him/her compensation at the amount of up to six gross wages. The Company has reported a liability by law for the payment of retirement compensation in accordance with IAS 19 “Employee Benefits”. The amount is based on forecasts made for the next five years, discounted with the long-term income percentage of risk free securities.

The Company has not developed and implemented post-employment benefit plans.

Net interest expense related to pension obligations is included in “Finance costs” in profit or loss. Service cost on the net defined benefit liability is included in “Employee benefits expense”.

Short-term employee benefits, including holiday entitlement, are current liabilities included in “Pension and other employee obligations”, measured at the undiscounted amount that the Company expects to pay as a result of the unused entitlement.

4.24. Provisions, contingent liabilities and contingent assets

Provisions are recognised when present obligations as a result of a past event will probably lead to an outflow of economic resources from the Company and amounts can be estimated reliably. Timing or amount of the outflow may still be uncertain. A present obligation arises from the presence of a legal or constructive commitment that has resulted from past events, for example, granted product warranties, legal disputes or onerous contracts. Restructuring provisions are recognised only if a detailed formal plan for the restructuring has been developed and implemented, or management has at least announced the plan’s main features to those affected by it. Provisions are not recognised for future operating losses.

Provisions are measured at the estimated expenditure required to settle the present obligation, based on the most reliable evidence available at the reporting date, including the risks and uncertainties associated with the present obligation. Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. Provisions are discounted to their present values, where the time value of money is material.

Any reimbursement that the Company can be virtually certain to collect from a third party with respect to the obligation is recognised as a separate asset. However, this asset may not exceed the amount of the related provision.

All provisions are reviewed at each reporting date and adjusted to reflect the current best estimate.

In those cases where the possible outflow of economic resources as a result of present obligations is considered improbable or remote, no liability is recognised.

Possible inflows of economic benefits to the Company that do not yet meet the recognition criteria of an asset are considered contingent assets.

4.25. Significant management judgement in applying accounting policies

The following are significant management judgements in applying the accounting policies of the Company that have the most significant effect on the financial statements. Critical estimation uncertainties are described in note 4.26.

4.25.1. Internally generated intangible assets and research and development costs

Significant judgement is required in distinguishing research from the development phase. Development costs are recognised as an asset when all the criteria are met, whereas research costs are expensed as incurred.

To distinguish any research-type project phase from the development phase, it is the Company's accounting policy to also require a detailed forecast of sales or cost savings expected to be generated by the intangible asset. The forecast is incorporated into the Company's overall budget forecast as the capitalization of development costs commences. This ensures that managerial accounting, impairment testing procedures and accounting for internally-generated intangible assets is based on the same data.

The Company's management also monitors whether the recognition requirements for development costs continue to be met. This is necessary as the economic success of any product development is uncertain and may be subject to future technical problems after the time of recognition.

4.25.2. Deferred tax assets

The assessment of the probability of future taxable income in which deferred tax assets can be utilized is based on the Company's latest approved budget forecast, which is adjusted for significant non-taxable income and expenses and specific limits to the use of any unused tax loss or credit. The tax rules in the numerous jurisdictions in which the Company operates are also carefully taken into consideration. If a positive forecast of taxable income indicates the probable use of a deferred tax asset, especially when it can be utilized without a time limit, that deferred tax asset is usually recognised in full. The recognition of deferred tax assets that are subject to certain legal or economic limits or uncertainties is assessed individually by management based on the specific facts and circumstances.

4.26. Estimation uncertainty

When preparing the financial statements management undertakes a number of judgements, estimates and assumptions about recognition and measurement of assets, liabilities, income and expenses.

The actual results may differ from the judgements, estimates and assumptions made by management, and will seldom equal the estimated results.

In the preparation of the presented Separate financial statements the significant judgments of the management in applying the accounting policies of the Company and the main sources of uncertainty of the accounting estimates do not differ from those disclosed in the annual financial statements of the Company as at 31 December 2024, except for changes in the estimate of income tax liability.

Information about significant judgements, estimates and assumptions that have the most significant effect on recognition and measurement of assets, liabilities, income and expenses are discussed below.

4.26.1. Impairment of non-financial assets

An impairment loss is recognised for the amount by which the asset's or cash-generating unit's carrying amount exceeds its recoverable amount, which is the higher of fair value less costs to sell and value-in-use. To determine the value-in-use, management estimates expected future cash flows from each cash-generating unit and determines a suitable interest rate in order to calculate the present value of those cash flows (see note 4.16). In the process of measuring expected future cash flows management makes assumptions about future operating results. These assumptions relate to future events and circumstances. The actual results may vary and may cause significant adjustments to the Company's assets within the next financial year.

In most cases, determining the applicable discount rate involves estimating the appropriate adjustment to market risk and the appropriate adjustment to asset-specific risk factors.

4.26.2. Useful lives of depreciable assets

Management reviews the useful lives of depreciable assets at each reporting date.

At 31 March 2025 management assesses that the useful lives represent the expected utility of the assets to the Company. The carrying amounts are analysed in notes 7,8 and 11. Actual results, however, may vary due to technical obsolescence, particularly relating to software and IT equipment.

4.26.3. Measurement of expected credit losses

Credit losses are the difference between all contractual cash flows due to the Company and all cash flows that the Company expects to receive. Expected credit losses are a probability-weighted estimate of credit losses that require the Company's judgment. Expected credit losses are discounted at the original effective interest rate (or the credit-adjusted effective interest rate for purchased or initially created financial assets with credit impairment).

4.26.4. Defined benefit liability

Management estimates the defined benefit liability annually with the assistance of independent actuaries; however, the actual outcome may vary due to estimation uncertainties. The estimate of its defined benefit liability is based on standard rates of inflation, medical cost trends and mortality. It also takes into account the Company's specific anticipation of future salary increases. Discount factors are determined close to each year-end by reference to high quality corporate bonds that are denominated in the currency in which the benefits will be paid and that have terms to maturity approximating to the terms of the related pension liability. Estimation uncertainties exist particularly with regard to actuarial assumptions, which may vary and significantly impact the defined benefit obligations and the annual defined benefit expenses.

4.26.5. Uncertain tax position and tax-related contingency

The Company's management has assessed whether it is probable that the tax authority will accept uncertain tax treatment. In its activities, the company complied with the tax practice and the probable tax treatment, and therefore the taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and the tax rate, correspond to the used and expected treatment that will be used in declaring income taxes.

5. Segment reporting

Management currently identifies the following company operating segments as further described in note 4.6. These operating segments are monitored and strategic decisions are made on the basis of adjusted segment operating results.

Segment information can be analyzed as follows for the reporting periods under review:

	System Integration	Hospitality	IT Services	Financial Industry	Others	Total
	31.12.2024 BGN'000	31.12.2024 BGN'000	31.12.2024 BGN'000	31.12.2024 BGN'000	31.12.2024 BGN'000	31.12.2024 BGN'000
Revenue from:						
- external customers	14 475	2 540	3 435	2 506	3 127	26 083
Segment revenues	14 475	2 540	3 435	2 506	3 127	26 083
Cost of materials and cost of goods sold	(12 623)	-	-	(1)	(241)	(12 865)
Hired services expenses	(660)	(920)	(522)	(419)	(584)	(3 105)
Employee benefits expense	(365)	(1 659)	(2 403)	(1 834)	(2 174)	(8 434)
Depreciation and amortisation of non-financial assets	(11)	(142)	(181)	(136)	(175)	(646)
Other expenses	(1)	(7)	(10)	(3)	(198)	(219)
Segment operating profit	815	(188)	319	113	(245)	814

The Company's revenues from external customers are divided into the following geographical areas:

	31.03.2025 BGN'000	31.03.2024 BGN'000
Bulgaria (domicile)	18 046	932
USA	2 852	-
UK	1 502	-
Other countries	3 683	-
Total	26 083	932

6. Goodwill

The Company's goodwill arose as a result of the business combination carried out in 2024, through the merger of six subsidiaries "Sirma CI" EAD, "Sirma InsurTech" EAD, "Sirma Solutions" EAD, "Sirma Business Consulting" EAD, "Sciart" EAD and "HRM Solutions" EAD into the parent company "Sirma Group Holding" JSC.

	31.03. 2025 BGN'000	31.12. 2024 BGN'000

Balance at 31 December 2024	(1 308)	(18 000)	(1 560)	(7 369)	-	(28 237)
Carrying amount at 31 December 2024	3 324	4 570	-	1 240	1 576	10 710

The Company's intangible assets reported under “Internally developed assets” are internally developed. These include assets as follows:

- **SIRMA CLOUD PLATFORM** is a platform for managing cloud environments.
- **Sirma Management Reporting** is a business analysis system.

SIRMA CLOUD PLATFORM is a platform for managing cloud environments:

- Manage virtualization in the data center
- Storage virtualization management
- Resource performance management
- Resource cost management
- Management of cloud distributed in different geographical locations.

Key functionalities include:

FULLY PLATFORM INDEPENDENT

- ✓ Supports standard and high-end hypervisors, storage, network and monitoring tools.
- ✓ Cloud build based on KVM, VMWare, LXN.

HIGH AVAILABILITY AND BUSINESS CONTINUITY

- ✓ High availability architecture.
- ✓ The database is deployed in an HA configuration
- ✓ Redefined behavior in case of host or virtual machine failure in order to achieve a cost-effective failover solution.

EDGE AND DISTRIBUTED CLOUD COMPUTING

- ✓ Dynamically increase cloud resources by adding remote hardware or virtual capacities.
- ✓ Automatic provisioning of remote resources.

ADAPTABLE, EXTENSIBLE AND INTEGRABLE

- ✓ Modular and extensible architecture.
- ✓ Configurable plug-ins for integration with third-party data center services.
- ✓ API for integration with higher-level tools such as billing and self-service portals.

CAPACITY AND PERFORMANCE MANAGEMENT

- ✓ Resource management to track and limit the use of compute, storage and network resources.
- ✓ Dynamically create clusters as pools of hosts that share datastores and virtual networks for load balancing, high availability, and high-performance computing.
- ✓ Dynamic creation of virtual data centers as fully isolated virtual infrastructure environments where a group of users, under the control of a VDC administrator, can create and manage compute, storage and network capacity.

VIRTUAL INFRASTRUCTURE MANAGEMENT AND ORCHESTRATION

- ✓ Management of virtual infrastructure to corporate data centers. End-to-end lifecycle management of virtual resources.
- ✓ Full control, monitoring and reporting of virtual infrastructure resources.

ACCOUNTING AND SHOWBACK

- ✓ Allocation of resource costs to individual units, groups and projects in the organization.
- ✓ Monitoring and control of costs according to the business plan of the project.
- ✓ Easy integration with any billing system.

Sirma management reporting includes processes, tools and technologies necessary to transform data into information, and information into knowledge and plans that imply quick and effective business actions and support the decision-making process.

It is through the developed reporting system that companies receive secure, consistent, comprehensible, easy to process and timely information, which creates prerequisites for an informed decision. Or:

- Supports making effective and informed decisions;
- Turns huge volumes of data into valuable business conclusions;
- Allows access, sharing, processing and analysis of data by the right people, at the right time and in the way they prefer;
- Provides a unified version of the truth;
- Preserves knowledge in the company;
- Saves time and effort of key figures in companies.

Sirma management reporting allows organizations to collect data from internal and external sources, prepare it for analysis, create and send requests to this data, and create reports, information boards (dashboards) and data visualization.

The Company reports intangible assets developed by the incorporated companies under the heading "Intellectual Property Rights". These include assets as follows:

Customer Intelligence Platform (CIP)

The centralization of CIP transaction processes in a database, as well as the use of semantic technologies in the retrieval, analysis and interpretation of data from all sources, allows 360 ° view and various analyzes that facilitate individual behavioral targeting;

Extracting additional value from the data - built-in intelligent algorithms, analytical tools, as well as the ability to customize solutions tailored to the individual needs of the retailer, provide valuable insights and information. The focus on data, a deep understanding of customer behavior and motivation, along with seamless delivery management to end customers, will help merchants personalize communication, improve the user experience and manage their customer loyalty;

RISK SCORE TOOLBOX (RSTBOX)

"Sirma Business Consulting" AD creates its innovative solution to support the risk units in the Banks by providing them with a tool with which they can manage and monitor: KPM (credit portfolio model) Expected Default (PD) LGD (loss in case of default) EAD (Exposure at Default) counterparty identifier for each transaction.

CEGATE solution

CEGATE is an integrated software solution with a web-based interface for managing and delivering customer information from various publicly and regulated government sources that provide specialized information to individuals or companies. The sources of data are not limited to: NOI BNB NAP TR RegiX and others. The system is developed on the basis of a three-layer architecture and provides end users with the possibility of fully functional data management for customers of the financial institution. The solution implements all good practices in the management and processing of personal data and their protection. In addition, it provides REST communication capabilities and implementation of all messages. CEGATE is a module-based solution and provides an opportunity, in addition to working through a user interface, to implement communication and perform operations requests and transactions through APIs.

DiGiBANK solution

DiGiBANK is an integrated software solution with a web-based interface for managing various banking services and operations remotely and on the basis of the global Internet environment (www). The system is developed on the basis of a three-layer architecture and provides end customers with a (single page) interface. The solution implements all the best practices in the implementation of remote end-user work processes, ensuring the full level of security and authentication of end-users. creating and reporting reporting forms. DiGiBANK is a modular based solution and provides an opportunity, in addition to working through a user interface, to implement communication and perform request and transaction operations through APIs.

REXPRESS solution

REXPRESS is an integrated software solution with a web-based interface for managing Bank Statutory Reports to the BNB and the ECB. The system was developed on the basis of a three-layer architecture and implements all good practices in the implementation of the processes for creating and reporting reporting forms. When exchanging reports, all guidelines and current regulations valid for financial institutions in the European Union and the Republic of Belarus are used. REXPRESS is modular based and provides complete information and reporting forms by codes and inherent requisites or attributes established by the regulator in the established formats and periodicity.

SCARDS solution

SCARDS is an integrated software solution with a web-based interface for managing Bank cards. The system is implemented on the basis of a three-layer architecture and implements all good practices in the implementation of the processes in the life of the bank card as a payment instrument and related financial transfers (transactions). When exchanging transactions, ISO 8583 is used.

UBXPAYMENTS solution

UBXPAYMENTS is an integrated software solution with a web-based interface for managing bank payment services and operations. The system is developed on the basis of a three-layer architecture and provides end users with the possibility of fully functional management of the payment process. The solution implements all good practices in managing and processing payment instructions based on file exchange of messages in different formats: MTMXXML ISO20022. In addition, it provides REST communication capabilities and implementation of all messages.

sHRedy

sHRedy is an information system for the creation and storage of electronic documents in the worker's or employee's work file that meets the requirements of the NVISSEDTDRS. After its completion, the information system will be offered as a subscription software product to insurers who wish to keep the employment records of their employees in the form of electronic employment records.

Through the information system, it will be possible to create, sign with an electronic signature, exchange between the parties to the employment relationship and store all types of electronic documents under Art. 6 para. 1 of NVISSEDTDRS.

The information system will make it possible to upload and store documents submitted on paper by taking an electronic image of them with a scanning device in a form and in a way that allows their reading and storage according to Art. 11 para. 2 of NVISSEDTDRS. This option will be available for all categories of documents under Art. 6 para. 1 of NVISSEDTDRS existing on paper and not only for those "submitted" by the worker/employee.

The information system now makes it possible to use it through the developed mobile application; allows the use of the developed built-in ChatBot when there is ambiguity in the actions to be taken by the worker/prospective employee/employer.

Sirma InSuite

Sirma InSuite is a complete solution for business management in the insurance sector based on the "no-code" platform of the global technology company for low-code/no-code CRM systems and business process management Creatio. It uses Creatio's standard directly integrated CRM functionalities related to customer service, marketing and sales, upgrading them with additional developed ones related to the administration and management of basic insurance processes.

This is the first independently developed product of the company that integrates the professional expertise of the Sirma Insurtech team regarding the creation and implementation of modern technological corporate solutions and the long-term experience in the financial non-banking sphere, especially the insurance sector.

The product aims to help insurance companies easily integrate a CRM solution with existing insurance systems, which will lead to the automation of part of the business processes and increase efficiency, while at the same time improving the customer experience and increasing their satisfaction.

Software platform CIM - Customer Intelligence and Monetization (B2B and B2C)

CIM's core functionalities are based on a cognitive software platform that includes B2B and B2C sales; possibility to create online stores, mobile applications for online commerce (Mobile commerce); an intelligent chatbot trained both for customer service and for increasing sales (Chatbot commerce); real-time monitoring of unregistered site visitors and marketing tools to attract current customers Sales Force Speed (SFS); as well as self-service solutions (Kiosk commerce).

Loyax

The Loyax system consists of various modules, functions and components.

The system operates in an integrated infrastructure that includes a core system that hosts the Loyax website, a loyalty management system and a mini customer relationship management system.

Loyax is aimed at business customers as a place to set up loyalty programs and advertising, and at individuals as a place to search for business locations or subscribe to event notifications.

The Company has not entered into material contractual commitments to acquire intangible assets as of 31 March 2025.

All amortization expenses are included within "Depreciation and amortization of non-financial assets" in the separate statement of profit or loss and other comprehensive income.

No intangible assets have been pledged as security for liabilities.

9. Investments in subsidiaries

The Company has the following investments in subsidiaries:

Name of the subsidiary	Country of incorporation and principal place of business	Main activities	31.03.2025	31.03.2025 share	31.12.2024	31.12.2024 share
Saifort EAD	Bulgaria	Software services	17 865	100%	17 865	100%
Impairment			(5 360)	-	(5 360)	-
Roweb Development	Romania	Software services	11 210	51,00%	11 210	51,00%

Total			33 083		33 042	

The subsidiaries are recognised in the financial statements of the Company using the cost method.

The shares of the subsidiaries are not traded on a stock exchange.

The Company has contingent liabilities as a guarantor on loans granted to subsidiaries (see note 33).

10. Investments in associates

As a result of the business combination, the Company acquired 4.4% of the capital of SEP Bulgaria AD, classified as an investment in an associate. The investment was fully impaired by one of the merging companies prior to the transformation.

11. Investment property

Investment properties are specially detached parts of buildings for self-operation, intended for long-term rent to subsidiaries and third parties. The investment properties have a total built-up area of 5 522 square meters and are part of a business building in Mladost district, Sofia.

Changes to the carrying amounts presented in the separate statement of financial position can be summarized as follows:

	Investment property BGN'000
Gross carrying amount	
Balance at 1 January 2025	4 703
Balance at 31 March 2025	4 703
Depreciation	
Balance at 1 January 2025	(510)
Depreciation	(12)
Balance at 31 March 2025	(522)
Carrying amount at 31 March 2025	4 181

	Investment property BGN'000
Gross carrying amount	
Balance at 1 January 2024	11 254
Transfer to own buildings as a result of the business combination	(6 551)
Balance at 31 December 2024	4 703
Depreciation	
Balance at 1 January 2024	(1 616)
Transfer to own buildings as a result of the business combination	1 205
Depreciation	(99)
Balance at 31 December 2024	(510)
Carrying amount at 31 December 2024	4 193

12. Deferred tax assets and liabilities

Deferred taxes arising from temporary differences and unused tax losses can be summarized as follows:

Deferred tax liabilities (assets)	1 January 2025	Acquired as a result of a business combination	Recognised in profit and loss	31 March 2025
	BGN'000	BGN'000	BGN'000	BGN'000
Non-current assets				
Property, plant and equipment, intangible assets, investment property	336	-	-	336
Impairment of investments	(675)	-	-	(675)
Current assets				
Trade and other receivables	(152)	-	-	(152)
Non-current liabilities				
Pension and other employee obligations	(60)	-	-	(60)
Current liabilities				
Employee obligations	(197)	-	-	(197)
Leasing contracts liabilities	(1)	-	-	(1)
Tax loss	(297)	-	-	(297)
	(1 046)	-	-	(1 046)
Deferred tax assets	336			336
Deferred tax liabilities	(1 382)			(1 382)
Recognised as:				
Net deferred tax (assets)	(1 046)			(1 046)

Deferred taxes for the comparative period 31.12.2024 can be summarized as follows:

Deferred tax liabilities (assets)	1 January 2024	Acquired as a result of a business combination	Recognised in profit and loss	31 December 2024
	BGN'000	BGN'000	BGN'000	BGN'000
Non-current assets				
Property, plant and equipment, intangible assets, investment property	118	126	92	336
Impairment of investments	(541)	(134)	-	(675)
Current assets				
Trade and other receivables	(5)	(144)	(3)	(152)
Non-current liabilities				
Pension and other employee obligations	(6)	(41)	(13)	(60)
Current liabilities				
Employee obligations	(9)	(327)	139	(197)
Leasing contracts liabilities	-	(1)	-	(1)
Tax loss	(388)	-	91	(297)
	(831)	(521)	306	(1 046)
Deferred tax assets	118			336
Deferred tax liabilities	(949)			(1 382)
Recognised as:				
Net deferred tax (assets)	(831)			(1 046)

All deferred tax assets and liabilities have been recognised in the separate statement of financial position.

13. Inventory

Inventory recognized in the consolidated statement of financial position consist of the following:

	31.03.2025 BGN'000	31.12.2024 BGN'000
Computers, laptops	262	1 260
Computer components	287	274
Materials and consumables, spare parts	20	29
	569	1 563

None of the inventories at 31 March 2025 are pledged as securities for liabilities.

14. Trade receivables

	31.03.2025 BGN'000	31.12.2024 BGN'000
Trade receivables, gross amount before impairment	14 253	10 213
Impairment losses on trade receivables	(272)	(272)
Trade receivables, net	13 981	9 941
Legal receivables, gross amount before impairment	19	19
Impairment losses on legal receivables	(19)	(19)
Other financial receivables, gross amount before impairment	282	282
Impairment losses on other financial receivables	(282)	(282)
Other financial receivables, net	-	-
Current trade and other financial receivables, net	13 981	9 941

All trade receivables are short term. The net carrying value of trade and other receivables is considered a reasonable approximation of fair value.

All trade receivables of the Company have been reviewed for indicators of impairment. They have applied simplified approach for determining the expected credit losses at the end of the period.

An analysis of unimpaired trade receivables that are past due is presented in note 34.

15. Prepayments and other assets

	31.03.2025 BGN'000	31.12.2024 BGN'000
Advances for delivery of goods and services	291	315
Deposit receivables	237	212
Prepaid expenses	173	199
Prepaid amounts to subcontractors	71	69
Reimbursable taxes	10	39
Other assets, non-financial	782	834

For all other assets of the Company a simplified approach has been applied to determine the expected credit losses at the end of the period.

16. Cash

Cash include the following components:

	31.03.2025 BGN'000	31.12.2024 BGN'000
Cash at bank and in hand:		
- BGN	937	7 057
- EUR	891	1 553
- GBP	1	1
- USD	683	1 342
Cash and cash equivalents	2 512	9 953

The Company has evaluated the expected credit losses on cash and cash equivalents. The estimated amount is less than 0.1% of the gross amount of cash deposited in financial institutions, which is therefore considered to be immaterial and has not been accounted for in the financial statements of the Company.

17. Equity

17.1. Share capital

The share capital of “Sirma Group Holding” JSC consists only of 59 360 518 fully paid ordinary shares with a nominal value of BGN 1. All shares are equally eligible to receive dividends and the repayment of capital and represent one vote at the shareholders meeting of the Company.

	31.03.2025 Number of shares	31.12.2024 Number of shares
Number of shares issued and fully paid:		
- beginning of the year	59 360 518	59 360 518
Number of shares issued and fully paid	59 360 518	59 360 518
Total number of shares authorized as at 31 March/31 December	59 360 518	59 360 518

A detailed list of shareholders is presented in Note 1.

17.2. Repurchased own shares

As of 31.03.2024 „Sirma Group Holding“ JSC holds 1 689 236 (31.12.2024 - 1 689 236) repurchased own shares at the total amount of BGN 1 689 236 (2,85% of share capital).

17.3. Share premium reserve

The share premium reserve in the amount of BGN 6 016 thousand consists of reserves from initial valuation of contributed fixed assets in the amount of BGN 3 619 thousand and reserves from issue of shares in the amount of BGN 2 397 thousand.

17.4. Other reserves

The other reserves consist of legal reserves set aside according to Art. 246 of the Commercial Law over the years as follows:

	31.03.2025 BGN'000	31.12.2024 BGN'000
Balance at January 1	1 609	1 458
Allocation of reserves	-	151
Balance at 31 March / 31 December	1 609	1 609

18. Provisions

The Company's provisions represent provisions for warranty support under a 2019 contract for a guarantee for good performance of hardware and software of one of the subsidiaries, which was merged into “Sirma Group Holding” JSC during the year. The warranty support period is 5 /five/ years from the commissioning of the hardware equipment and software in 2020.

19. Employee remuneration

19.1. Employee benefits expense

Expenses recognised for employee benefits include:

	31.03.2025 BGN'000	31.03.2024 BGN'000
Salary expenses	(7 801)	(475)
Social security expenses	(835)	(43)
Employee benefit expenses, capitalized in development for internally developed intangible assets	202	-
Employee benefits expense	(8 434)	(518)

19.2. Pension and other employee obligations

The liabilities for pension and other employee obligations recognised in the statement of financial position consist of the following amounts:

	31.03.2025 BGN'000	31.12.2024 BGN'000
Non-current:		
Compensations in compliance with Labour Code	627	627
Non-current pension and other employee obligations	627	627
Current:		
Payroll obligations	2 000	2 610
Social security obligations	485	489
Accrued holiday entitlement	1 316	1 316
Current pension and other employee obligations	3 801	4 415

The current portion of these liabilities represents the Company's obligations to its current employees that are expected to be settled during 2024. Other short-term employee obligations arise mainly from accrued holiday entitlement at the end of reporting date. As none of the employees has the right for early settlement of pension arrangements, the remaining part of pension obligations for defined benefit plans is considered non-current.

In accordance with the requirements upon termination of the employment relationship under Article 222, paragraph 2 and paragraph 3 of the Labour Code, the employee shall have the right to:

* sickness benefit in the amount of his gross wage for a period of 2 months, if he has at least five years of service and has not received compensation on the same grounds in the last 5 years.

* compensation, after acquiring the right to a pension for length of service and old age, irrespective of the reason for termination - in the amount of his gross salary for a period of 2 months, and if he worked with the same employer during the last 10 years of his work experience - compensation in the amount of his gross salary for a period of 6 months.

20. Borrowings

Borrowings include the following financial liabilities:

	Current		Non-current	
	31.03.2025 BGN'000	31.12.2024 BGN'000	31.03.2025 BGN'000	31.12.2024 BGN'000
Financial liabilities measured at amortized cost				
Bank loans	1 366	229	5 674	6 009
Interest on bank loans	-	10	-	-
Total carrying amounts	1 366	239	5 674	6 009

All loans are denominated in Bulgarian leva (BGN).

20.1. Borrowings at amortized cost

Bank	Type of loan	Currency	Total amount of credit (BGN)	Outstanding obligation at 31.03.2025 (BGN)	Date of contract	Interest rate	Maturity date	Pledges
“Unicredit BulBank” AD	Overdraft	BGN	6 000 000	-	12.12.2024	The applicable variable interest rate index and additional interest rate for regular debt for the relevant interest period.	12.12.2027	Pledge of receivables
“United Bulgarian Bank” AD	Bank credit	BGN	9 400 000	6 233 333,87	09.10.2024	Variable interest rate in the amount of UBB's short-term interest rate /SIP/ for the contract period plus an annual premium.	09.10.2032	Pledge of receivables, pledge of commercial enterprises, pledge of property
“United Bulgarian Bank” AD	Overdraft	BGN	8 000 000	805 597,45	10.10.2024	Variable interest rate in the amount of UBB's short-term interest rate /SIP/ for the contract period plus an annual premium.	10.10.2026	Pledge of receivables

The carrying values of borrowings are considered to be a reasonable approximation of fair value.

21. Lease liabilities

	31.03.2025 BGN'000	31.12.2024 BGN'000
Lease liabilities – non-current portion	665	515
Lease liabilities – current portion	423	322
Lease liabilities	1 088	837

Future minimum lease payments at 31 December were as follows:

	Minimum lease payments due				
	Within 1 year BGN'000	1-2 years хил. лв.	2-3 years хил. лв.	3-4 years хил. лв.	4-5 years хил. лв.
31 March 2025					
Lease payments	437	344	258	75	-
Finance charges	(14)	(8)	(3)	(1)	-
Net present values	423	336	255	74	-
31 December 2024					
Lease payments	340	237	192	88	5
Finance charges	(12)	(7)	(4)	(2)	-
Net present values	328	230	188	86	5

Interest expense on leases included in the finance costs for the period ended 31 March 2025 was BGN 4 thousand (31.12.2024: BGN 9 thousand).

Total cash outflow for leases for the period ended 31 March 2025 was BGN 82 thousand (31.12.2024: BGN 119 thousand).

22. Trade and other payables

	31.03.2025 BGN'000	31.12.2024 BGN'000
Non-current:		
Trade payables	4 954	9 198
Liability for acquisition of a subsidiary Investments in subsidiaries	4 169	4 169
Financial liabilities	9 123	13 367
Tax payables	843	803
Other liabilities	8	8
Non-financial liabilities	851	811
Current trade and other payables	9 974	14 178

The carrying values of current trade and other payables are considered to be a reasonable approximation of fair value.

23. Contract liabilities

	31.03.2025 BGN'000	31.12.2024 BGN'000
Contract liabilities – advances received for delivery of IT services	2 041	2 240
Total contract liabilities	2 041	2 240

24. Revenues from sales

Revenues from sales by product line includes:

Product lines	31.03.2025 BGN'000	31.03.2024 BGN'000

	21 566	24 595

See note 4.18 about information related to the accounting policy for each category financial instruments. Description of the risk management objectives and policies of the Company related to the financial instruments is presented in note 35.

35. Financial instrument risk

Risk management objectives and policies

The Company is exposed to various risks in relation to financial instruments. The Company's financial assets and liabilities by category are summarized in note 34. The main types of risks are market risk, credit risk and liquidity risk.

The Company's risk management is coordinated at its headquarters, in close co-operation with the board of directors and focuses on actively securing the Company's short to medium-term cash flows by minimizing the exposure to financial markets.

The Company does not actively engage in the trading of financial assets for speculative purposes nor does it write options.

The interim separate financial statements do not include all information on risk management and disclosures required in the preparation of annual financial statements and should be read in conjunction with the annual financial statements of the Company as of 31 December 2024. The objectives and policies of the Company for capital management, credit and liquidity risk are described in the last annual financial statement. There were no changes in the risk management policy for financial instruments during the period.

The most significant financial risks to which the Company is exposed are described below.

35.1. Market risk analysis

The Company is exposed to market risk through its use of financial instruments and specifically to currency risk, interest rate risk and certain other price risks, which result from both its operating and investing activities.

As the economic consequences of the war in Ukraine unfolded, strong inflationary pressures arose and annual inflation for the period March 2025 compared to March 2024, as measured by National Statistical Institute with the Harmonized Index of Consumer Prices (HICP) is 4%.

35.1.1. Foreign currency risk

Most of the Company's transactions are carried out in Bulgarian leva (BGN). Exposures to currency exchange rates arise from the Company's overseas sales and purchases, which are primarily denominated in US-Dollars.

To mitigate the Company's exposure to foreign currency risk, non-BGN cash flows are monitored. Generally, Company's risk management procedures distinguish short-term foreign currency cash flows (due within 6 months) from longer-term cash flows. Where the amounts to be paid and received in a specific currency are expected to largely offset one another, no further hedging activity is undertaken, as is usually the case in the Company.

35.1.2. Interest rate risk

The Company's policy is to minimize interest rate cash flow risk exposures on long-term financing. Longer-term borrowings are therefore usually at fixed rates.

At 31 March 2025, the Company is not exposed to a significant risk of changes in market interest rates on the company's investment loan since the interest rate has no change during the year. All other financial assets and liabilities of the Company have fixed interest rates.

35.2. Credit risk

Credit risk is the risk that a counterparty fails to discharge an obligation to the Company. The Company is exposed to this risk for various financial instruments, for example by granting loans and receivables to customers, placing deposits, etc. The Company's maximum exposure to credit risk is limited to the carrying amount of financial assets recognised at the reporting date.

The Company continuously monitors defaults of customers and other counterparties, identified either individually or by group, and incorporates this information into its credit risk controls. Where available at reasonable cost, external credit ratings and/or reports on customers and other counterparties are obtained and used. The Company's policy is to deal only with creditworthy counterparties. The Company's management considers that all the above financial assets that are not impaired or past due for each of the reporting dates under review are of good credit quality.

The Company has not provided its financial assets as collateral for transactions other than collateral for received bank loans.

The credit risk for cash and cash equivalents is considered negligible, since the counterparties are reputable banks with high quality external credit ratings.

35.3. Liquidity risk

Liquidity risk is the risk arising from the Company not being able to meet its obligations. The Company manages its liquidity needs by monitoring scheduled debt servicing payments for long-term financial liabilities as well as forecast cash inflows and outflows due in day-to-day business. Liquidity needs are monitored in various time bands, on a day-to-day and week-to-week basis, as well as on the basis of a rolling 30-day projection. Long-term liquidity needs for a 180-day and a 360-day lookout period are identified monthly. Net cash requirements are compared to available borrowing facilities in order to determine headroom or any shortfalls. This analysis shows that available borrowing facilities are expected to be sufficient over the lookout period.

The Company's objective is to maintain cash to meet its liquidity requirements for 30-day periods. Funding for long-term liquidity needs is additionally secured by an adequate amount of committed credit facilities.

Financial assets used for managing liquidity risk

The Company considers expected cash flows from financial assets in assessing and managing liquidity risk, in particular its cash resources and trade receivables. The Company's existing cash resources and trade receivables do not significantly exceed the current cash outflow requirements. Cash flows from trade and other receivables are all contractually due within six months.

36. Capital management policies and procedures

The Company's capital management objectives are:

- to ensure the Company's ability to continue as a going concern; and
- to provide an adequate return to the shareholder by pricing products and services commensurately with the level of risk.

The Company monitors capital on the basis of the correlation between adjusted capital and net debt.

Net debt comprises of total liabilities, incl. total borrowings, trade and other payables less the carrying amount of cash and cash equivalents.

Company's goal is to maintain a capital-to-net debt ratio within reasonable limits.

The Company manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Company may adjust the amount of dividends paid to shareholders, return capital to shareholders, issue new shares, or sell assets to reduce debt.

No changes were made in the objectives, policies or processes for managing capital during the presented periods and in the description of what the Company manages as capital.

37. Post-reporting date events

Buyback of shares by the company

At the Extraordinary General Meeting of Shareholders of “Sirma Group Holding” JSC held on 08.04.2025, a decision was adopted for the company to repurchase its own shares.

The Board of Directors must carry out the repurchase under the following conditions:

- The maximum number of shares subject to repurchase is 5 300 000.
- Minimum price 0.85 BGN per share and maximum price 4 BGN per share. Maximum total price for repurchase of shares - no more than 21 200 000 (twenty-one million and two hundred thousand) BGN. In the event of a change in the official currency in the Republic of Bulgaria, the price of a share will be calculated in the new official currency determined in accordance with the applicable legislation, applying the legally prescribed exchange rate.
- The redemption period is until 31.12.2028.
- Method of repurchase - through an investment intermediary.

The General Meeting of Shareholders authorizes the Board of Directors to take all necessary legal and factual actions to implement the buyback.

Sale of own shares by the company

On 09.04.2025, in implementation of its bonus policy, Sirma Group Holding JSC sold 400 000 of its shares at an average price of BGN 1.00 per share for a total value of BGN 400 000. The shares represent 0,67% of the company's capital. The sale was made on an unregulated over-the-counter market (Bulgaria).

No adjusting or significant non-adjusting events have occurred between the reporting date and the date of authorization.
